

SHIELD INSURANCE

Tool Used: Excel, Power BI

INTRODUCTION

This project for Shield Insurance involves creating an interactive Power BI dashboard to track revenue, customer growth, policy trends, and settlement expectations. The dashboard provides month-over-month comparisons and insights across age groups, cities, and sales modes to help the business understand key performance patterns.

Using Power BI and Excel, the project followed a straightforward process of data preparation, modeling, KPI development, and dashboard design. The final solution brings together important metrics and trends in one place, making it easier for the team to make informed and timely decisions.

Business Objectives of the Dashboard

- Monitor **month-over-month revenue and customer growth**.
- Understand **age-group behavior**, policy preference, and expected settlement.
- Identify the most effective **sales modes** for revenue and customer acquisition.
- Evaluate **city-wise performance** to prioritize markets.
- Enable **faster, data-driven decisions** through a unified performance view.
- Support **financial planning** by analyzing expected settlement trends.

Recommendation

- Focus marketing and product strategy on the 31–40 age group, as it drives the highest customers and revenue.
- Strengthen Offline Agent channel performance, while gradually reducing dependency by promoting digital onboarding.
- Review pricing and underwriting rules for 41–50 and 65+ age groups due to higher estimated settlement exposure.
- Optimize the policy portfolio by promoting high-performing policies and reworking low-adoption ones.
- Analyze the March 2023 growth spike to identify repeatable and profitable drivers.

Business Impact of the Dashboard

- Clear identification of high-value segments
- Improved revenue and channel focus
- Better risk visibility and control
- Smarter product and policy planning
- Early detection of performance trends

A low-angle, upward-looking perspective of several modern skyscrapers with glass facades. The buildings are arranged in a way that creates a sense of height and scale, with their lines converging towards the top of the frame. The sky is a clear, deep blue. The glass reflects the sky and each other, creating a complex pattern of lines and colors. A small, warm light source is visible in the upper left corner, possibly a window or a light fixture.

THANK YOU
